Dying to Sea

by Frank Heavey

The dying Salton Sea - USA Today

Now he directs Friends of the Earth Middle East, the most active of several environmental groups working to galvanize concern for the dying sea. With a staff of 15, Friends of the Earth Middle East has worked to raise awareness about the Salton Sea's declining water levels and the threats posed by developing projects in the surrounding area.

The news comes via a blog post in The Dying Sea World Of Matter. The images in this narrative describe the aftermath of one of the largest environmental disasters man has perpetrated – the death of the Aral Sea, once the world's fourth largest lake. The rising salinity of the shrinking sea made the remaining lake uninhabitable for the As I Lay Dying Anodyne Sea (OFFICIAL VIDEO) - YouTube

The Salton Sea has been shrinking for decades is more than another ecological disaster. Its fate is a case study in how human actions have contributed to the demise of one of the world's largest lakes. The Salton Sea is one of the largest freshwater lakes in the world, but it has been shrinking for decades due to over-pumping of groundwater and the release of water from the Colorado River. The lake is now less than half the size it was in the 1940s, and its salinity has increased by more than 100 times. This has made the lake uninhabitable for most marine life and has led to the loss of thousands of acres of wetlands.
